1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 6 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The claim is indefinite because it is not clear whether it is drawn to the combination of the container and sheet products, or whether it is drawn to the subcombination of the container only. Compare the requirements of claim 6 (that appear to indicate that applicants intention may be to claim the combination) with those of claim 1, from which claim 6 depends. Claim 1 appears to clearly be drawn to the subcombination, since it recites the sheet products only as an intended use of the claimed container. In this office action all claims are considered to be drawn to the subcombination of a container that has the purpose of holding sheet products. No sheet products are considered to be claimed, since this has not been done in a clear and unambiguous fashion. However, clarification of the scope of claim 6 is required.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-3 and 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over DeLaforcade (7,287,666). The claimed stopper reads on elements such as 41 that prevent the drive member (friction drag member as claimed) from pressing against the stack, and thus preventing the backward movement of the sheet products by the drive member during opening of the lid as claimed. Thus the reference discloses most of the elements of the claims, but lacks a pressing member as required in claim1. On the other hand the element is conventional in the relevant art (note the references of record, for example only). Thus it would have been obvious to provide the apparatus of DeLaforcade with a pressing member, for the purpose of providing better contact with the drive member, further to improve dispensing of the container content.

5. Claim 4 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
